### THE ADVANCED PLUS 3 MK II

The Advanced Plus 3 Mk 2 <AP3> (requires Plus 1 to operate) now you can turn your Electron into a full disc system - no more waiting for tape loading or "bad block" / "data 7" messages. The AP3 is the only fully compatible disc upgrade running Acorn's own filing system - the ADFS. (As supplied in Acorn's Plus 3, Master 128, Master Compact, Archimedes and A3000 range). AP3 Mk 2 gives you:

- 1) A fully Acorn-compatible 1770 interface in cartridge form with spare 16K ROM socket. Can be fitted with DFS modification kit to give BBC compatibility.
- 2) 80 track double sided - 3.5" disc drive. Storage capacity 640k.
- 3) Acorn ADFS (Advanced Disc Filing System).
- 4) Welcome disc with extra 3 bonus games of Snapper, Draughts, Reversi.
- 5) Utilities.
- 6) Full documentation.

Special package price available for those who do not already own a Plus 1. A second drive, either 3.5" or 5.25" can be added by fitting our AP3 second drive lead and configuring the second drive as Drive 1. The AP3 drive can also be used on a BBC or Master computer. We continue to add new titles to the list of Electron software on 3.5" ADFS. (See software section and Games Compendium which include many of the Superior titles not previously available).

**COMPLETE PACKAGE ONLY**  
£129 excl VAT; £148.35 inc VAT

#### ADFS VERSION 1.1

Suitable for existing Plus 3 or A.P.4 users.  
£14.95 ex VAT; £17.19 inc VAT

#### ADFS E00

For Electron users with either Plus 3 or A.P.4 and 32k of S/W RAM i.e. ABR.  
3.5" ADFS (manual avail. sep.)

£14.95 ex VAT; £17.19 inc VAT

5.25" ADFS (manual avail. sep.) £14.00 ex VAT; £16.10 inc VAT

5.25" DFS (2 discs+ADFS manual) £19.00 ex VAT; £21.85 inc VAT

#### AP4 MOD

This converts an AP3 to an AP34 (ie. DFSE00) supplied as a two chip set, full documentation and fitting instructions.

£21.74 ex VAT. £25.00 inc. VAT

**ADVANCED PLUS 1** ... The plus 1 is the main expansion for the Electron as designed and originally produced by Acorn.

The only currently advertised addition to the Electron that is a fully compatible cased unit that we can recommend for future upgrades i.e. Disc upgrades such as AP3/AP4.

£50.00 excl VAT; £57.50 inc VAT

### ADVANCED PLUS 5

A unique interface for those wanting the maximum expansion from just one slot in the PLUS 1.

£58.00 Ex VAT; £68.24 inc VAT

#### \*\* USER PORT \*\*

A low cost unit for those who just require a user port interface.

£19.99 ex VAT; £22.95 inc VAT

### ADVANCED DISC TOOLKIT

(01) /M/B/E/C £20 ex VAT £34.50 inc VAT

Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd & co-processors A.C.P.'s BEST SELLING product containing over 30 commands incl: - powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMs, load/run programs below page, automatic menu, file transfer (inc. locked cassette files), ADFS utils etc, etc ('it's superb'... Database Pubs. - 'A top-class toolkit - I have no hesitation in recommending it... Acorn User Nov. 86) (16K EPROM & FULL MANUAL)

### ADVANCED DISC INVESTIGATOR

(04) /M/B/E/C £25 ex VAT £28.75 inc VAT

### ADVANCED ELECTRON DFS

(05) /E/E £21.00 ex VAT £24.15 inc VAT

### ADVANCED ELECTRON DFS E00

(14) /E+ABR £17.30 ex VAT £19.99 inc VAT

### ADVANCED 1770 DFS

3 versions ADM/C(11) - ADM(12) ADE (13)  
£30.00 ex VAT £34.50 inc VAT

### ADVANCED CONTROL PANEL

(20) /M/B/E/C £30 ex VAT £34.50 inc VAT

### ADVANCED FILE MANAGER

£25 ex VAT £28.75 inc VAT

### ADVANCED ROM ADAPTER 2

An Acorn approved cartridge containing a card with special 'zero' profile sockets.

£13.00 excl VAT; £14.95 inc VAT

### ADVANCED BATTERY-BACKED RAM

A standard Acorn approved cartridge but containing 32k (2 x 16k) of sideways RAM. The added bonus is the battery-backed feature that holds the RAM contents when the power is switched off! Different ROM images can be loaded into either bank from ROM images previously saved. The banks can also be locked to imitate ROM use. Now it is possible to have View & ViewSheet in one cartridge every time you switch on. Other uses include &E00 ADFS, printer buffer, ROM software development. The use of ABR is simplified by the newly written PRES software utilities which include: SaveROM, LoadROM, Lock, Unlock, Printer Buffer, Zero and MakeROM a new utility to put your own software from disc or tape into ABR & use the ROM filing system. All software is supplied in ABR with a simple menu to transfer the utilities to your own media. No hardware switching - totally software controlled. Instructions for using supplied software and necessary information for users developing their own applications.

"It's a superb add-on and a must for all serious Electron users" ... *Electron User*

£39.00 excl VAT; £44.85 incl VAT

**ADVANCED PLUS 6** ... a fully buffered 6 ROM expansion module for the Electron user. AP6 is fitted inside the advanced Plus 1 or a modified Acorn Plus 1 (when used with the Acorn Plus 3, 5 ROM sockets are available). All sockets are designed to accept either ROWEPROMS or RAM chips. A further feature is the optional AP7 upgrade.

"A marvellous piece of design ... don't hesitate, buy it!" - *EU, May '88*

£33.00 excl VAT; £37.95 inc VAT

**UPGRADE SERVICE** for the original  
Acorn Plus 1 to Advanced Plus 1 and AP6  
£40.00 excl VAT; £46.00 inc VAT

### ADVANCED PLUS 7

An internal battery-backed RAM upgrade for the Advanced Plus 6. TWO 16K pages of Sideways RAM, battery-backed and featuring full write protect facility. Just like ABR but fitted internally & vacating a cartridge slot. This product is compatible with all Acorn BBC/Master & Electron computers.

£39.50 excl VAT; £45.42 inc VAT

## ADVANCED PLUS 2 ROM

We feel this is one of the best, low cost, additions we have produced for the Electron & +1 user, especially for plus 3, AP3 & ABR users.

Now with this easy to fit upgrade you can add:

1. Fix for Tape filing system in Hi-res screen modes.
2. \*ROMS - to display all ROMs/ROM images present on the system.
3. \*UNPLUG - disable ROM/ROM image.
4. \*INSERT - enables or inserts a previously unplugged ROM.
5. \*KILL - to totally disable the Plus 1.
6. \*LOCK - to lock a sideways RAM bank in ABR, AQR, AP7.
7. \*LROMS - to lock all sideways RAM banks found.
8. \*UNLOCK - to unlock a sideways RAM bank in ABR, AQR, AP7.
9. \*UROMS - to unlock all sideways RAM banks found.
10. \*SAVEROM - saves a copy of a ROM image to the current filing system.
11. \*LOADRUN - loads a ROM image from the current FS into a RAM bank.
12. \*FORMAT - will format an ADFS disc for Plus 3 or AP3.
13. \*VERIFY - reads and tests every sector on an ADFS disc.
14. \*VFORM - formats and verifies an ADFS disc in one command.
15. \*BUILD - creates a text file that can be used by \*EXEC (ie IBOOT).
16. \*LIST - displays a numbered listing of a text file.
17. \*TYPE - displays a file on screen with no line numbers.
18. \*DUMP - to view a file's contents on screen.
19. \*LANG - selects a default language to be booted on <CTRL-BREAK>
20. \*HELP - provides a full 'help' list on all the ROM's commands.

Now there is no need to search for your utilities disc every time you want to format/Verify a disc, Build a IBoot file or Lock/unlock/Load a ROM image into ABR PLUS much more ... the ideal companion from the company that produces the Acorn Plus 1.

£11.00 ex VAT; £12.65 inc VAT

"The AP2 is the definitive Plus 1 Rom ... I'm not sure what I'd do without it ... Like all of PRES'S other products it's been well worth waiting for." *EU July '88*

# NEW! TEN of the BEST! EDUCATIONAL GAMES

Packed full of some of the best educational games from the pages of *Electron User*, the new Ten of the Best Educational Games is the ideal way for your children to learn about maths, spelling, anagrams, telling the time, general knowledge, and even the rudiments of running a business!

Specially compiled by the *Electron User* team to give a good grounding in all aspects of learning, and at the very special price of only £5.95 on tape, or £6.95 on 3.5in disc, this collection is a treat you and your children cannot afford to miss!

Give your children hours of fun, and help them to learn the easy way by ordering your copy today.

## THE PROGRAMS

**Company Count** – Work your way up through the company starting off as a messenger, and ending up as president!

**Hungry Harry** – Find out what it's like to be an assistant in a busy shop. Can you work out the correct change to give the customers?

**Lemonade Stall** – Try your hand at running a lemonade stall at a popular seaside resort.

**Dozer Disorder** – Fill in the

missing letters after they are bulldozed into a pit.

**Crocodile** – Unscramble the letters of a word before the crocodile gets you.

**Snail Trail** – See how good you are at general knowledge in this trivia quiz.

**Hiss** – Improve your spelling by guiding a snake round the garden eating up words in the right letter order.

**Maths Fun** – Test your powers of mental arithmetic.

**Odd One Out** – Pick the object that doesn't fit from the list of five.

**Yule Spell** – Guess the hidden word or you'll lose your Christmas presents!

**ONLY £5.95**

Order your copy today, using the form on Page 45

## Cover Story

### 14 Galaxy Guide

Now you can squeeze more into your micro's memory with this useful Basic program-shrinking routine

### 6 News

All the latest developments in the world of the Electron. Plus the Gallup chart.

### 7 Gallup

Find out the positions of your favourite games in this up-to-date chart.

### 8 Cheats

We conclude the exclusive Electron User series that helps you hit previously unobtainable scores. This month

- ✓ Killa Gorilla2
- ✓ Last Ninja
- ✓ Orbital
- ✓ Pipeline
- ✓ Repton Infinity
- ✓ Zenon

### 11 Proc Compiler

Now you can keep a library of routines and bring them together easily with this useful utility.

### 18 Pendragon

Our resident adventure wizard bids farewell with more hints, tips and clues for popular adventures.

### 21 Chesster

An action-packed arcade game where chess pieces move in strange ways but there's really no other connection with the board game.

### 27 Easy Print

An extremely useful routine that lets you make the most of your printer by accessing its many features the easy way.

### 33 Software

At last, an arcade game that's completely different to any previously seen on the Electron. We give it the once over.

### 34 Time Warp

A look back at the very first issue of Electron User and a report on the exciting developments that rocked the world of the Electron at that time.

### 36 Gunboat

Into combat with this computer version of the classic two player game of Battleship.

### 41 Micro Messages

A selection of the many informative and interesting letters you have been sending us over the past few weeks.

## Sam's on the ball

BILLED as the fastest, wackiest, toughest computer ball game yet, Ballistix will be the star offering on Play It Again Sam 14 from Superior Software (0652 58565).

A number one smash hit on the Atari ST and Amiga, Ballistix features 60 different action screens. Likely to be teamed with it will be Predator, the computer game of the Schwarzenegger film which challenges players to take a crack commando unit into the South African jungle to rescue a bunch of trapped diplomats.

Other titles for Sam 14 are still to be finalised, but Superior boss Steve Hanson is considering a new game, Star Port, from the author of Quest, Tony Oakden. It's a space version of Tony's previous arcade adventure Camelot. Also a likely contender is Network from Peter Scott. It's a similar but bigger

Predator

Ballistix

version of Peter's previous game Pandemonium, which was a hit on Sam 13.

Looking ahead, Superior will be going into the trivia quiz market. Christmas release will be The Quiz Challenge game which is a

typical trivia offering set to a snooker theme with coloured balls related to different questions. It comes from author Walter Mansell who also produced Smash & Grab and A Question of Sport.

## Electrons tackle IT with ease

NEW information technology courses which are hitting the country's classrooms are sending many education authorities scurrying for the nearest Archimedes or PC dealer in the belief that they must go up market to achieve the stipulated results.

Few believe that they can reach the necessary criteria with anything as lowly as the Electron but down in Cornwall, staff at Falmouth School are of a different opinion.

For the last 12 years, the computer department of this 1200 pupil secondary school has revolved around 15 Electrons. They will continue to be used for the Information Technology courses which have now superseded the former Computer Studies classes.

"When we bought equipment for the computer department years ago, we went for a good hands-on machine rather than high quality", said IT co-ordinator Trevor Greenslade. "It was a good decision. The Electrons have been reliable and robust and even after seven years they are still going strong. They do a jolly good job."

"I have been involved in computer studies for as long as I can remember. I have often thought of upgrading to other machines but somehow we never seemed to have the money."

"Many of the schools down here have networks and that could be something for the future. Until then, we will continue with the Electrons."

Trevor is confident that the Elks are quite capable of supporting the demands of the new IT syllabus. Even if he is successful in acquiring a network, there will still be plenty of work for them to do. They will be moved down into the lower school to give first and second year pupils their first introduction to secondary school computing.

## E-Type draws the crowds

PLANS by Impact Software (0742 769950) to bring top Archimedes car racing game E-Type to the Electron have met with overwhelming support from the public.

Mark Botterill of Impact reports more than 500 advanced orders for the BBC/Electron version of which half are from Electron owners.

"This is the first car racing game for the Electron apart from the straight track Overdrive which was brought out five years ago," said Mark. "It has resulted in the largest number of advanced orders we have ever had for any game".

E-Type was originally due out on May 1 but had to be put back about five weeks because programmer Gordon Key was held up by his work on Apocalypse.

## It's goodbye – and hello!

Regrettably this, the 82nd issue of *Electron User*, is the last. It marks the end of an era in computer magazine publishing.

When the first issue appeared, in October 1983, Acorn had just launched its mini-marvel of a micro. Excitement mounted as demand soared in the months that followed. Then, two years later, the bubble burst and Acorn stopped production.

But that was far from being the end of the Electron – or of *Electron User*. Warehouses were piled high with the machines, and they continued to be sold in large numbers.

And such was the loyalty of you, our readers, that *Electron User*, under the dedicated editorship of Roland Waddilove, has continued publishing for five long years after Acorn had finished supporting the machine. A remarkable record.

But now we feel it is time to move on. We know there is still lots to be discovered about the Electron, and many more games and utilities still to be written for it.

From now on you'll be able to find them in two completely different magazines. First, our big brother, *The Micro User*, will be featuring much more about the Electron in its pages, and it will be providing a monthly feast of entertainment and information for the serious Electron user.

But the really exciting news for users of all Acorn machines is the launch of a completely new dimension in computer magazine publishing – *Let's Compute!*

For a quick preview of what you can expect turn to the Centre Pages. But this can only give a brief indication of the fun times you are going to have, month after month, with *Let's Compute!* – and your Electron. We'll be seeing you!

DEREK MEAKIN

# GALLUP

## SOFTWARE CHART

THIS MONTH	LAST MONTH	TITLE (Software House)	COMMENTS	PRICE
1	●	PRO-BOXING Code Masters	It's Straight to the number one spot for budget king CodeMasters' cut price version of By Fair Means or Foul.	2.99
2	●	SUMMER OLYMPIAD Kixx	Summer is here, and this is your chance to be athletic without even going outside. Definitely value for money here.	2.99
3	2	PAPERBOY Encore	Still hanging around near the top of the charts. It's a pity about the flicker and slow speed. Get a turbo to improve matters.	2.99
4	5	YIE AR KUNG FU Hit Squad	There have been many clones and any combat game is invariably compared to it. A nice trip into meaningless violence if that's your thing.	2.99
5	9	BOXER Acornsoft	Feel that you want to hit something? This is your third chance so far in this month's chart. Take your feelings out on the keyboard and a little sprite.	2.99
6	10	STRIKE FORCE HARRIER Alternative	Now a budget title, you can take off with this excellent Mirrorsoft flight simulator. Good feel to the controls and realistic movement.	2.99
7	11	REPTON 2 Blue Ribbon	The little green friend has been revitalised in one of his earlier roles. Shame on you if you are missing this one from your collection.	2.99
8	12	COLOSSUS 4 CHESS CDS	The oldest strategy game in the world. Good training for a human versus human contest. So see if you can pit your wits against the computer and win.	9.95
9	13	TARZAN Alternative	If leaping from tree to tree appeals to you, and the voice of the wild beckons you may be a little disappointed with this one.	2.99
10	8	SPELLBINDER Superior	Another original from the Superior stable. Arcade adventure but with a little more to offer than some of its contemporaries.	9.95
11	14	CREEPY CAVE Atlantis	Budget time with a chilly underground arcade adventure. Why the ghost wants your house key is beyond me. But you'd better get him quickly.	1.99
12	15	JOE BLADE 2 Players	The graphics are good and the game very playable. The puzzle screens will keep you and community conscious Joe busy for hours.	1.99
13	16	PLAY IT AGAIN SAM 5 Superior	Another compilation of four games, this time covering the brilliant Imogen, colourful Elixir and new ones Bugblaster and Fortress.	9.95
14	17	RICOCHET Superior	Recognisable format, very addictive and a must if you are looking for something as challenging as Citadel and Palace of Magic.	2.99
15	●	ELIXIR Superior	Also on Sam 5, you are the unfortunate chemist transformed to the size of one of his own test tubes. Can you escape the laboratory alive?	9.95
16	●	CODENAME: DROID Blue Ribbon	Good old Stryker is off again, this time on his own and at a budget price. Easily one of the best arcade adventures around.	2.99
17	●	PALACE OF MAGIC Superior	There's a feel of Citadel about this arcade adventure full of puzzles and deadly encounters. Definitely one not to miss.	2.99
18	●	LAST OF THE FREE Audiogenic	Still hanging around the fringes of the charts. You will have to search out the shops that sell this old - but still not knocked out - timer.	7.95
19	●	JOE BLADE Players	The original Joe story, and though you don't need to buy both, you'll be missing out if you don't. Electron programming at its best.	1.99
20	5	GYROSCOPE Melbourne House	If you suffer from dizzy spells don't go for this one. Again an oldie making a comeback, buy it if you get the chance - it comes of a good vintage.	8.95

# Cheat it again, Joe

Here's the final installment of the three part series in which Mark Gidley - author of the Cheat it Again series - has been helping you get to those high scores that were previously way out of reach

## Volume 5

OUR bulging mailbag has confirmed that the 12 cheats published over the last two months have been very popular. Now, we're sure you'll be just as pleased with the last six cheats lifted from Cheat it Again, Joe volume 4.

This month there's cheats for the Last Ninja, Orbital, Pipeline, Repton Infinity, Zenon and the Play It Again Sam version of Killer Gorilla 2.

Just type in the listings and save them to your own blank disc or tape - not the one carrying the original software. Then run them and follow the on-screen instructions for more enjoyment from your favourite games.

### Repton Infinity cheat

Infinite lives (Y/N) : Yes  
Passwords not needed (Y/N) : Yes

OK - Insert Repton Infinity tape and press play ...

**Wayne G Boyd shows  
how to build up a  
program from a  
library of procedures**

**WHY** re-invent the wheel each time you write a program? You should be able to build up a library of routines – input, double height, menus and so on – and use them in every new program you write.

Once the library is constructed this routine, Compile, will help disc users put the procedures together. Tape users can use the method described in the panel.

When your procedures have been put together in this way you can write the core of the program to call them. Remember that if one procedure calls another you must always include both in your programs.

Compile displays the routines on your disc – currently the ones in the \$ directory – and lets you select the ones you want putting together. If you want to keep your procedures in a different directory just change line 150 to, say:

```
150 *DIR P
```

The program will ignore all filenames with a ! before them, so !BOOT and any other ! program will not be included in the menu. If you type the program in and save it as !MAIN it will remain hidden as your procedures are displayed.

When you save your procedures to disc you do so as a normal Basic program in the root directory. You don't need to adjust any data statements or to add the name of the new procedure to any menu list in this program because it automatically reads the disc's catalogue information.

When you use Compile, select the procedures required from the menu by entering the appropriate numbers. You can continue to enter numbers until you press H followed by Return.

Then Compile will put the selected procedures together in to one long program and ask you for the line number you want your new Basic program to start from. After this has been entered the new routine will appear on the screen ready for further work by the programmer.

## Using tape?

As cataloguing a tape takes a long time, a program like Compile is not suitable for that medium. But you can still build up a library of procedures and build a program if you use this method:

- Save each procedure on a separate tape – or at least remember the index counter on your recorder – so that the appropriate one can be found quickly.

- Load the first routine as if it was a full program using:

```
LOAD "filename"
```

- Add other routines to the end of this

# Building Blocks

## Procedure Compilation Program

Designed and Written By Wayne G Boyd

3. COLOUR
4. RAM
5. DISC
6. MODE9
7. CLS
8. INPUT
9. BACK G
10. LI BOX
11. SQ BACK
12. H LIGHT
13. DBL

Enter a proc number, or 'H' when happy

=>

## Setting up

It is extremely important that the !boot file – or other start up file – be set up in the following manner:

```
SR=PAGE
PAGE=84900
CHAIN"MAIN"
```

It must be set up like this because the program needs to know the page of the micro so the procedures can be put there and the program itself must be run way above this.

using:

```
OSCLI"LOAD filename "+STR$(TOP-2)
```

- Renumber your program using the command:

```
RENUMBER startline, step
```

Your routines will now be ready for you to add the main core of the program to.

This method will also work from disc, but is not as convenient to use as selecting filenames from a menu. However, the OSCLI command above is useful, combining two Basic programs whether you're using tape or disc.

QUAL-SOFT

# THOUGHTWARE

Sports simulations

"A real challenge to the thinking football fan... Bobby Robson could do worse than have a crack at this in his preparation for the World Cup".

AMSTRAD ACTION  
REVIEW

QUAL-SOFT COMMENT: At last an INTELLIGENT management game for the knowledgeable soccer enthusiast!

TAPE 1  
QUALIFIERS

## ROME 90\*

TAPE 2  
FINALS

### A WORLD CUP MANAGEMENT SIMULATION

Summer 1988 and English International football is at its lowest ebb. We have failed miserably for the European Nations Cup, and had a string of very poor International results. In a few months we will set out on the '90 World Cup qualifying trail. You have been given the most important job of restoring English pride in their football. You have a match in Athens, Denmark at Wembley, and a South American tour, to assemble a team, first to qualify, and then to beat the world's best in Rome.

#### TAPE 1 (Qualifiers)

- \* Current squad of 16 players + 20 user defined players.
- \* Friendlies in Athens, at Wembley + South American tour.
- \* ANY team formation you choose, 2 from 5 substitutes.
- \* In match tactics any no. of individual player adjustments.
- \* Your qualification group, full results and table.

#### TAPE 2 (Finals)

- \* Choose a 20 man squad to take to the finals.
- \* Group of 4 prelims, 16 to final knockout comp.
- \* Extra Time, PENALTY SHOOT-OUTS, where relevant.
- \* Formation and strength information on opposition.
- \* 2 from 9 substitutes (the FA tells us so).

### ENGLAND'S GAMES: FULL PITCH, 22 MAN, 3D GRAPHICS & SOUND EFFECTS

QUAL-SOFT comments: With 5 levels of play, 12 depths of sophistication, and "fun" graphics, this game can be enjoyed by an 8 year old youngster as a "fun" game, and by the most sophisticated as a tactical/strategy challenge of the highest order.

PACKAGE: Tape 1 plus Tape 2 plus 20 Page Manual £9.95 (57K RAM usage. Some would call this a MEGAGAME. YES IT WILL RUN ON YOUR 32k BBC.

QUALSOFT GUARANTEE: Sent by 1ST CLASS POST on day of the order with P.O., Cheque, Access payment is received. Telephone Access orders accepted.

\* ROME '90 is an update of the classic MEXICO '86

# NEW! - AMIGA PACK

Commodore A500  
Flight Of Fantasy

## £399

### A500 BATMAN PACK

The Commodore A500 Batman Pack must surely rank as one of the most popular computer packs ever. The pack features the Commodore Amiga 500 computer with mouse controller and TV modulator, plus four top software titles. The software includes: 'Batman The Movie' - Rid Gotham City of the cunning Joker, in O'Brien's top selling title based on the blockbuster Batman film; 'New Zealand Story' - high quality conversion of the leading arcade game; 'Interceptor' - Dogfight with two F-16's in this leading flight simulator; 'Deluxe Paint II' - top quality Amiga graphics package which set the standard for others to follow. Return the coupon for further details.

#### PACK INCLUDES:

A500 Computer & Mouse	£399.99
A52D TV Modulator	£24.99
Batman The Movie	£24.95
New Zealand Story	£24.95
Interceptor	£24.95
Deluxe Paint II	£24.95

TOTAL RRP: £549.78

Less Pack Saving: £150.78

### AMIGA 2000

For the more serious or professional applications user, Commodore have a selection of systems based around the expandable Amiga 2000, at prices from £1295+VAT. The A2000 features a full 1Mb RAM (expandable to 5Mb), 9 system expansion slots, plus IBM compatibility with the use of PC-XT or PC-AT bridgeboards. Complete and return the coupon, putting a tick in the A2000 box, for details of A2000 computer systems.

## £1295

+VAT = £1489.25

### FLIGHT OF FANTASY

Flight of Fantasy is the very latest Amiga 500 pack from Commodore, featuring BRAND NEW software releases, to make this the most spectacular A500 pack ever! The pack features the Amiga 500 computer with mouse controller and TV modulator, as well as four top software titles. These include the following:

#### DELUXE PAINT II:

The high quality graphics program that set the standard for other Amiga art packages. Deluxe Paint II includes powerful, easy to use tools that bring out the artist in you. Create masterpieces, presentations, 3D perspectives or just doodle.

#### ESCAPE / ROBOT MONSTERS:

Here's something completely different: a science fiction story with comic book style graphics. Our heroes Duke and Duke are on the Planet X rescuing Humans who have been captured by the Robot Monsters and forced to create an evil Robot Army in DEPTACRY. EARTH! Duke and Duke fight their way through hordes of evil fiends to help the Humans escape.

#### RAINBOW ISLANDS:

Step on your magic shoes, practice throwing a rainbow and you're ready to go island hopping. From the island of Don to Mountain Island, you will encounter Don himself, striking insects, aerial combat machines, machine gun rainforests, the terrible beings of legend and folklore. Finally enter the world of darkness and its inhabitants.

#### F29 RETALIATOR:

The ultimate in flight simulation with a choice of two aircraft and four battle environments with dozens of different tactical missions. Aerial combat, strategic bombing, interactive ground-based games, seagroup carriers. The set of features is endless. Real time cockpit displays, including true radar enhance the realistic feel of this stunning simulation.

#### PACK INCLUDES:

A500 Computer & Mouse	£399.99
A52D TV Modulator	£24.99
Deluxe Paint II	£24.95
Escape/Robot Monsters	£19.99
Rainbow Islands	£24.95
F29 Retaliator	£24.95

TOTAL RRP: £544.82

Less Pack Saving: £145.82

PACK PRICE: £399.00

FOR FURTHER DETAILS OF THE AMIGA RANGE, COMPLETE THE COUPON AND RETURN IT TO SILICA SHOP  
THE UK's No1 AMIGA SPECIALISTS

### SILICA SHOP OFFER YOU

**FREE OVERNIGHT COURIER DELIVERY:** On all hardware orders shipped in the UK.  
**TECHNICAL SUPPORT HELPLINE:** Team of Amiga technical experts at your service.  
**PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.  
**ESTABLISHED 12 YEARS:** Proven track record in professional computer sales.  
**£13M TURNOVER (with 60 staff):** Solid and reliable with maintained growth.  
**BUSINESS/EDUCATION/GOVERNMENT:** Volume discounts available for large orders.  
**SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.  
**THE FULL STOCK RANGE:** All of your Amiga requirements from one supplier.  
**FREE CATALOGUES:** Will be mailed to you with offers and software/peripheral details.  
**PAYMENT:** By cash, cheque and all major credit cards.  
**CREDIT PAYMENT TERMS:** Silica is licensed credit brokers - return coupon for details.

Before you decide when to buy your new Amiga computer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after buying your Amiga, when you may require additional peripherals or software, or help and advice with your new purchase. And, will the company you buy from contact you with details of new products? At Silica Shop, we ensure that you will have nothing to worry about. Silica have been established for over 12 years, and have an annual turnover of £13 million. With our unrivalled experience and expertise, we can now claim to match our customers' requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest Free Literature and begin to experience the "Silica Shop Service".

RETURN THE COUPON NOW FOR  
FREE BROCHURES

THE mists of time are fast gathering and a swirling in the air tells me that my time is at an end. Time that is for Pendragon to leave these walls and return once more to my fortress in the hills.

It seems as only a twinkling in the eye that I first put pen to paper and wrote of adventures old and new to you, my steadfast Electron users. Yet four years have passed and it is time for me to move on.

But I must not leave without bidding farewell and extending heartfelt thanks to many friends and allies I have met along the way.

To the readers I must thank both of you! No, seriously, gratitude must especially go to Harry Bastien, Sheila Beattie, Robert Henderson, Martyn Amos, Carys Jones, Emma Rutherford, Craig Romans, Les Shipton, Bill Trevelyan and many others for help and encouragement during my time here – and especially for all the cards and kindnesses during my ill health in 1987.

Special thanks must also go to Robert O'Leary of Robico, Geoff Larsen of Larsoft, and Steve Maltz of Shards for their support, not only to me but in various ways to the Electron as well. They are without doubt the masters of the Electron text adventure.

And a degree of gratitude should also be extended to Roland Waddilove – despite the fact that he often cut my copy with shears when I felt only nail-scissors would do – for his editorial skills, and to my colleague the Mad Hatter for painstaking help and advice whenever it has been needed.

Many have asked my name and who or what I am during these past 46 months, and that secret which is known to just a few, I now feel is time to reveal.

My name is Nic Outterside – a former assistant editor of Atari ST User – and my age falls somewhat more than 30 years. I am a father of two lovely children and reside in the wilds of the mountains of North Wales. That is all you need to know, and I hope it has satiated some curiosity.

Another question I am oft asked is what are my favourite Electron adventures. I have, at times, hinted at favourites of mine, and once I believe even detailed a list.

But here for posterity are what I believe to be the best adventures ever released for the Electron – for sanity's sake I have not included any BBC Micro games which happen to run on expanded 64k Electrons.

All are games which I will play again and again until my peripherals eventually wear out and my Electron is called to the great silicon shop in the sky.

They are also deemed as general classics of the genre and I recommend you try to lay your hands on at least a few of them before they are lost for eternity.

If adventures still trouble, be not afraid because my dear friend the Mad Hatter in *The Micro User* magazine has now inherited all of my adventure scrolls and promises to give help and succour to Electron adventurers while carrying out his tasks for BBC Micro users.

In the meantime, while you are all cheering my departure and scratching your heads in puzzlement, I continue my series of maps

# ADVENTURES

## *By Pendragon*

# End of the never-ending journey

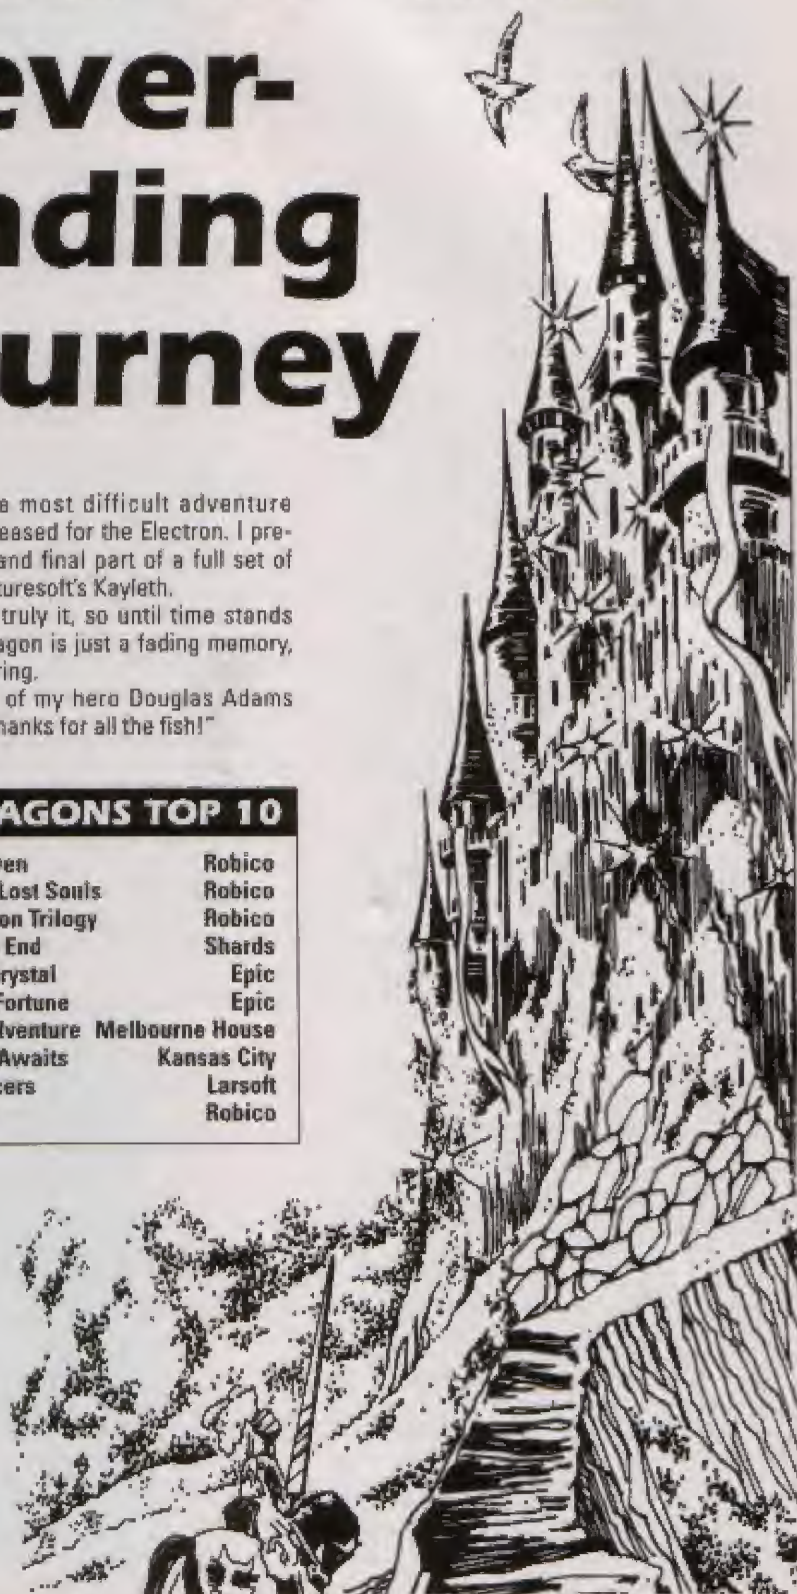

to some of the most difficult adventure games ever released for the Electron. I present the third and final part of a full set of plans to Adventuresoft's Kayleth.

Well that is truly it, so until time stands still and Pendragon is just a fading memory, happy adventuring.

Or in words of my hero Douglas Adams "So long, and thanks for all the fish!"

# SPECIAL ANNOUNCEMENT

To celebrate the 7th anniversary of  
electron <sup>user</sup> and  a Grand Draw

will be held for all  customers  
during June 1990.

£100's of prizes including AP3, Plus 1's,  
Battery Backed Ram, Basic Editor etc . . .

When placing order please include the  
'yes please' corner flash to be included  
in the draw.

**YES  
PLEASE**

Closing date June 29th.

## INCREASE ELECTRON PERFORMANCE AND BBC COMPATIBILITY WITH OUR RANGE OF ADD-ONS

### E2P SECOND PROCESSOR

Gives the Electron equivalent performance to a BBC with a Second Processor.  
Adds a complete processor with its own 64k memory bank to run all programs while the  
Electron handles screen, keyboard, discs, etc.  
Gives 30k memory for BASIC programs and 44k memory for HiBASIC programs.  
(Electron HiBASIC available separately)  
Gives up to 300% speed increase in programs.  
Fits into a Plus One/ROMbox Plus slot.  
Operating system available on ROM or 3.5" ADPS disc or Tape (state requirement)  
Price £79 + £5 for case

### MODE 7 Mk2 UNIT

Gives exactly the same Mode 7 display screen as the BBC.  
Allows BBC Mode 7 software to run on the Electron.  
Magazine programs, Adventure games, Educational, Wordwise, Prestel, Teletext.  
Includes Prestel software - Prestel requires a modem and our RS423 adaptor.  
You will need a ROM socket to hold the Mode 7 ROM, eg. in our RS423 adaptor.  
For Mode 7 programs with HIMEM above 84000 you will need our Shadow RAM board.  
Fits inside the Electron, alongside the Shadow RAM board.  
Price £49 for you to fit, or £59 fitted.  
Also available as a kit - board and ROM for £25 - you buy the components.

### SHADOW RAM BOARD

Our equivalent of the Slogger Master RAM Board, with Turbo and 64K modes.  
Gives up to 300% speed increase and 28.5k program memory in all screen modes.  
Fits inside the Electron.  
Price £59 for you to fit, or £69 fitted.

### RS423 SERIAL CARTRIDGE

Connects the Electron to serial RS423/RS232 devices, eg. printers, modems.  
Allows the transfer of programs, data, etc. from one computer to another.  
Has the same socket, so uses the same leads as the BBC.  
Includes a socket for a 32k RAM or 16k ROM, eg. the Mode 7 ROM.  
Fits into a Plus One/ROMbox Plus slot.  
Price £29.95 + £5 for a case + £20 for a 32k RAM

### ROMPLUS-144 ROM CARTRIDGE

Sideways ROM cartridge with Printer Buffer and RAM Filing System.  
Holds 8 ROMs or 7 ROMs and a 32k RAM  
Fits into a Plus One/ROMbox Plus slot  
Price £39 + £20 for a 32k RAM

All prices inclusive of post, etc. - Please allow 28 days delivery.

### WE ALSO REPAIR ELECTRONS

**JAF A SYSTEMS**  
9 Lony-Garwa, Caerphilly,  
Mid-Glamorgan CF8 1NL  
Tel: 0222 887203

## A1 COMPUTER SERVICES

### For your Computer Repairs and Supplies

We are Authorised Amstrad Dealers  
and also an authorised  
Microvitec Service Centre.

Used Equipment bought and sold.  
We also supply ribbons and discs at  
discount prices

*Leasing and credit  
facilities available*

**9 PADDOCK MOUNT, DAWLEY,  
TELFORD, SHROPSHIRE. TF4 3PR**

**Tel: 0952-502737**

**Fax: 0952 630110**

YOU have been kidnapped by the Black Acorn — an interdimensional being who intends to rule the universe. His plan is to shanghai innocent people and convert them into pawns to serve in his Black Guards.

But you have escaped and located the ion panels which supply the whole of his empire with power. Each cell of the panels has a black activator which you can short circuit merely by landing on it.

Clear each panel three times and you'll move on to the next even harder one. And you'll find the guards even faster, so take care.

To help you in your quest you can use your stolen Nova device. By pressing the spacebar you'll draw a bolt of energy from nearby stars. This will replenish your power and repel any guards.

However, Nova will only function four times, so use it with care. Leaving the board will cause your Gyro Pak to operate, so if you're quick, you can return. This will reduce your energy, as will near proximity to one of the power-sapping guards.

If the energy bar reaches zero your mission is ended. Can you succeed? Type in the listing and find out!

# CHESSTER

Chess pieces move in new ways in this action-packed game from Lyn Davies

# ANNOUNCING SOMETHING completely different USERS of the Electron

**BATTLE WITH BASIC!  
LEARN ABOUT LOGO!  
SUCCEED WITH SCIENCE!  
GET AHEAD WITH GAMES!  
PEP UP YOUR PROGRAMMING!  
PLUS PUZZLES AND PRIZES GALORE!**

*Let's Compute!* brings an exciting new dimension to computing. You'll find it full of fun things to try out on your Electron. It will help you get to grips with Basic and explore the mysteries of Logo. You'll discover fascinating ways of linking your Electron to the outside world. Even show you, month by month, how to write you own mega-game. Plus lots of surprises! Never before has there been a computer magazine like *Let's Compute!* You'll find its action-packed pages crammed with enough hints, tips and ideas to keep you and your Electron occupied for a whole month!

**Take out a subscription and don't miss one single issue!**

**YES  
PLEASE!**

Ticks as  
required

- ☐ 3101 Send me the next 12 issues of *Let's Compute!* for the special introductory price of £12 (including postage and packing).
- ☐ 3102 I'd also like to become a founder member of the *Let's Compute!* Club for the special price of £3 (instead of the regular £5) – so please send me the bumper Club pack with my first issue.
- ☐ 3103 I'll order *Let's Compute!* from my newsagent, but I'd still like to join the Club and receive my bumper members pack for £5.

I wish to pay by:

- ☐ Cheque payable to Database Publications  
☐ Credit card No:

No stamp need be posted in UK

*If you're joining the Club, state whether you'd like to receive your free software on ☐ disc or ☐ tape.*

**PHONE ORDERS:  
051-352 1275**

# that's for

(and all the  
other Acorn  
computers)

# LET'S COMPUTE!

## LOOK!

Here's a  
bumper  
pack of  
goodies  
for everyone!

Every new member of the *Let's Compute!* Club receives a giant package of gifts to help you make the most of your computer. In addition to your Gold Membership Card you'll also receive lots of software on disc or tape, plus a crib cube, unique function key guide, notepad, hat, badge, stickers, money-saving vouchers, and much, much more.

It costs only £5 to join, but if you subscribe to *Let's Compute!* on the form alongside you can also become a founder member, with all the same privileges, for just £3!

# Save on batteries!

For your personal stereo, radio or TV

You know  
how expensive  
it is to replace your  
batteries when they run  
down. Even with rechargeable  
batteries you still have to wait 14 hours  
for a full charge.

We have solved the problem with the unique  
superfast powerful battery and charger kit.

This amazing device will completely charge four standard  
AA size rechargeable batteries in under 2 hours and each  
battery can be recharged at least 1,000 times.

Further, for a limited period we can sell the charger and  
four rechargeable batteries at the staggeringly low cost of  
£19.95 (plus £1 p&p).

*It will pay for itself within weeks*

**TO ORDER PLEASE USE THE FORM ON PAGE 45**

# Banish those VDU blues!

ALTHOUGH modern dot matrix printers are extremely versatile, access to their many features is not easy. However, using the routine here – Easy Printer – you can easily send the complex sequence of VDU codes needed to produce the various styles.

It will also stop you making mistakes which would make your printer do something that was never intended.

The program is a menu driven Basic utility which allows the setting of up to 26 Epson compatible printer control codes and shows at a glance the options that have been set.

As well as allowing you to set all the usual options such as NLQ, compressed, emphasised, enlarged and so on you can also set things like form length, left and right margins and international character sets.

It is very easy to set your printer up for use with programs like View and Viewsheet, and a printer driver may only be needed for localised effects such as italics or underlining.

The program will produce a sample print-out, giving a preview of the effects you have set – useful for testing or comparing different types of printers.

Type in the program listing and save it under an appropriate filename. You should add REMs to the start of lines 70 and 80 until the program is working correctly but once you're sure it's right you must remove them or the program will not work as intended.

When run, you will first be asked for information about your printer. This enables the correct setting of the line feed option and the default right hand margin for either a normal or wide carriage printer. When this is

**Leslie Goodridge offers  
a routine designed to  
set up your printer  
automatically**

done the menu screen will be displayed listing the various options.

Initially these will be set to their default values which are either indicated in brackets or shown as a value against each option. The assumed values are shown in the panel.

If these values are only marginally different from your printer settings, it is probably not worth altering the DIP switches, since switching the control code options on and off again will reset them anyway.

To set up any combination of the displayed options, press any of the keys A to Z. For example, pressing C followed by G will

set the printer up to produce condensed italic characters.

When an option is set, an asterisk will appear beside it as a reminder. To reset the option press the key again and the asterisk will disappear showing the default setting has been reinstated.

Pressing f1 will reset all options to their default values – a very useful feature when a large number of options need resetting.

When changing form length and line spacing you will be prompted to enter an appropriate value when necessary.

If you select options B, C, D, N or O the number of characters which can be printed on a line will vary, a fact reflected in the value displayed for the right hand margin. Changing from pica to elite, for example, will cause the right hand margin value to change from 80 to 96.

Setting options U or V will fix the physical positions of the margins when printing. The number of printable characters between the them, however, still depends on the character pitch and the margin values displayed on screen will reflect any changes.

You may occasionally see slight differences in these values if you change character pitch a number of times. This is because they are displayed on screen as whole numbers, even though the actual values may be fractions of a character space.

The program also controls the interaction between the left and right hand margins to prevent them going out of range, and you may see an occasional error message to

## Initial settings

- Draft
- Pica characters
- U.S. character set
- Paper out enabled
- No skip over perforations
- Form length: 66 lines or 11 in
- Line spacing: 36/216in (equivalent to the normal 1/6in)

This is Draft Pica US Chrs on the Panasonic KX-P1080 with descenders gjpqy and 1 line spacing 36/216 in.

This is NLQ Pica Condensed Italics US Chrs on the Panasonic KX-P1080 with descenders gjpqy and line spacing 36/216 in.

This is NLQ Pica Emphasized Proportional US Chrs on the Panasonic KX-P1080 with descenders gjpqy and line spacing 36/216 in.

This is Draft Elite Enlarged Emphasized Proportional US Chrs on the Panasonic KX-P1080 with descenders gjpqy and line spacing 36/216 in.

This is Draft Elite Enlarged Proportional Underlined US Chrs on the Panasonic KX-P1080 with descenders gjpqy and line spacing 36/216 in.

warn you if there is a possibility of this happening.

Some control code combinations cancel or override each other. Character pitch, for example, has priority over some other character modes.

To avoid such problems the program prevents the selection of certain combinations. You cannot, for example, select superscript and subscript together, or select condensed, enlarged or elite if character pitch has already been set with options Q or N.

Once you have set your options, you have

the choice of pressing function key f9 to exit from the program or pressing f5 to obtain a sample printout.

If you select the latter you will be prompted to enter the name of the printer, or to change the name if one has been entered already. Once this is done you will get a printout using the options previously selected.

This lists the options together with the actual effect and the printer name, thus giving you a complete record. When the printout is completed control passes back to the menu.

If you press f9 to exit from the program

you will see a short exit menu, allowing you to return to Basic or alternatively enter View or Viewsheet.

Pressing Break at any time will clear all variables and run the program again from the start. This allows you, for example, to reconfigure the program for a different printer with a different size of carriage.

Easy Printer will prove to be a very useful utility which will help you to control many of your printer's facilities. In fact it may even help you to discover some you did not know it had, or that you could not be bothered to use because of the hassle of entering all those VDU codes.

# THE 1990 ATARI ST PRODUCT GUIDE

## PERIPHERALS & ACCESSORIES

FLOPPY DISK DRIVES

MONITORS

JOYSTICKS

SCANNERS

PRINTERS

DISK BOXES

ROBOTICS

**PLUS MUCH MORE!**  
SEND FOR YOUR FREE PRODUCT GUIDE!

## THE UK's No 1 GUIDE TO THE ATARI ST

**AND ITS FREE!**

If you are interested in buying an Atari ST (or if you already own one), then you will not want to miss the FREE Atari ST Product Guide from Silica Shop. This 48 page, full colour guide is packed with details of peripherals, accessories, books and software for the Atari ST range of computers. In fact, the 1990 Atari ST Product Guide is the most comprehensive product handbook available for the Atari ST. Not only does the Product Guide provide an invaluable source of information on the UK's largest range of ST products, it is available absolutely FREE OF CHARGE! Just complete and return the coupon below for your FREE COPY! In addition to ALL Atari hardware, the range of products featured in the catalogue includes:

### PERIPHERALS:

Robotics	Clocks	Floppy Disk Drives
Hard Disk Drives	Emulators	Graphic Tablets
MIDI/Music	Modems	Modulators
Monitors	Mouse controllers	Plotters
Printers	Scanners	Scientific Equip
Sound Digitisers	Sound Samplers	Video Enhancers

### ACCESSORIES:

Cables	Cleaning Kits	Disks
Disk Boxes	Dust Covers	Joysticks
Monitor Access	Mouse Access	Power Supplies
Printer Labels	Printer Paper	Printer Ribbons
Stands	Upgrades	

### BOOKS:

ST Dedicated 68000 Processor General Computing

### SOFTWARE - ENTERTAINMENT:

Arcade Games	Compilations	Advanced Sims
Sport Sims	Adventures	Board & Strategy

### SOFTWARE - PRODUCTIVITY:

Art & Graphics	Accounts	CAD
Communications	Databases	Desktop Publishing
Education/Childs	Music	Programming
Spreadsheets	Utilities	Word Processors

## SOFTWARE & BOOKS

ARCADE GAMES

ART & GRAPHICS

EDUCATIONAL

MUSIC

Write your own arcade smashes using the

# ARCADE GAME Creator

ArCADE Game Creator is a suite of programs for the Electron and BBC Micros. Taken from the pages of *Electron User*, it lets you into the secrets of writing fast-action arcade games, and provides you with a number of utilities to make design and programming easier.

Among the programs are:

- A Mode 5 sprite editor that lets you design your own multi-coloured characters.
- A selection of fast print routines that will move sprites both in front or behind other objects on the screen.
- Map generators that will squeeze a Mode 5 screen into 8 bytes!
- Scrolling maps.
- Score update and printing routines.
- ... and much, much more.

To help you make the most of the Arcade Game Creator, you will also get a comprehensive manual based on the original series.

Written in an easy to read style and with many illustrations and screen shots, it contains all the information you need to create and animate sprites, to design backgrounds and to link the two together into a complete arcade game.

If you are an aspiring games programmer, this is an offer you simply cannot afford to miss!

IN these days of ever increasing sophistication it is most refreshing to play a game as simple yet addictive as Audiogenic's *Helter Skelter*.

The storyline goes like this: The world has been overrun by herds of comical looking monsters and your mission is to bounce the little blighters into oblivion. I choose the word bounce specifically, since you are a red rubber sphere of considerable size.

Ball control is achieved by means of three keys – left, right and bounce and your mastery of the bounce button will determine the outcome of the game.

Oddly enough the world that you are defending is constructed in platform game fashion – single screens, with several platforms floating in mid-air. Each is inhabited by one or more randomly moving monsters just waiting to be bounced.

Being an ace tactician, my first inclination was to ricochet around the screen as fast as possible, obliterating everything that I touched.

After I had doubled the indigenous monster population in five seconds I decided to adopt a more subtle approach – so I sat down and read the instructions.

The accompanying script indicated that the programmers had anticipated my

sledgehammer approach by specifying the order in which the monsters must be despatched.

On all occasions, the next one to be blatted is highlighted by a large white arrow hovering above its head. Contact with any other beast induces instant binary fission, the result being two furry fiends scurrying around the screen instead of one.

Don't be put off by the fact that you can literally sprint through the first few screens, as this is a deliberate ploy to boost your confidence. Things soon begin to increase in both complexity and difficulty – don't forget that you have a total of 74 levels to complete before you reach the end!

*Helter Skelter*'s monsters are not in any way harmful to the bouncing ball and the game's controlling factor is time.

A digital clock counts down the seconds as you race to obliterate the monster masses. Tension is heightened by a rapid ticking sound that starts at the 10 seconds marker.

Scoring is relatively simple. You receive 500 points for every monster you zap, a further 1,000 bonus for every second that remains on the clock, and a final skill bonus which is halved every time you press the bounce button.

This final bonus encourages a player to adopt the most economical approach to completing a screen – this is also probably the quickest.

Variety is introduced by means of various tokens that appear at random throughout

electron  
user

Golden  
game

the game. Time limit permitting, you may be able to collect the letters E-X-T-R-A and be rewarded with an additional ball.

Alternatively there is a range of symbol tokens that can temporarily paralyse the monsters, interrupt the passage of time, or best of all, teleport you to the next level.

Sound is used sparingly: There is no title tune and the spot effects are simple, but this doesn't really detract from the game's appeal.

Considering the now ageing Electron's capabilities, *Helter Skelter* strikes a good balance between graphic detail and colour use. On the animation front, the characters exhibit flicker-free and fluid movement, with the realistic response of the ball to the apparent gravitational effects being worthy of note.

If you become bored with playing your way through the same old levels time after time and you're not good enough to get any further, try pressing E while you're on the title screen.

Once the discrete message Edit mode has disappeared you will be faced with a blank screen – a canvas upon which you can express the more devious side of your personality.

This built-in level designer allows you to create an infinite number of new screens, provided that you save them to disc or tape in groups of 40.

You are given total control over the size and location of all platforms, the number of monsters present, the starting position of your ball, the time allocation and the size of the low bounce bonus.

The only failing of this otherwise powerful editor is that you cannot edit a screen once you have committed it to memory. If you've used game editors in the past you will realise the magnitude of this omission.

There is no way that you will ever create a well balanced level at the first attempt – it will always be too easy, too difficult or just downright impossible!

I would rate *Helter Skelter* as one of the better platform games to have hit the market in recent years. Simplicity is the keyword throughout: Simple controls, simple gameplay, simply fun!

# HELTER SKELTER

...bounce into action

FROM the very last issue of *Electron User* we travel back in time to the very first issue of this long-running magazine (the only Database Publications' product that has lasted longer than *'Electron User's* six years and ten months is the evergreen *The Micro User*).

This month we'll take a look at how *Electron User* started and what was in issue number one, volume one.

The first October 1983 issue was never sold as a standalone magazine and was, as our older readers will remember, a pullout section of *The Micro User*. In fact, this was the only reason I bought the magazine, and I'm sure many other readers felt the same way.

The cover pictured the Electron and introduced four features that were to become very familiar to its new readership. And talking of readership, even by looking at the front cover it was easy to see that the magazine was clearly aimed at a very young audience indeed.

Casting Agency introduced a revolutionary and unique shape dictionary – an essential source of off-the-shelf user-defined characters ready to be incorporated into your own programs. These proved to be extremely popular, with reader submissions arriving by the sackful each month. Try this ballet dancer from Vol. 1 No. 1:

```
23,224,61,61,61,25,255,188,252,60
23,225,126,255,36,36,60,32,32,32
```

If you enter these two lines of code and then print character 224 on top of the 225 you should end up with a twirling ballet dancer!

Following a similar tack to Casting Agency was Sounds Exciting which aimed to build up a library of exciting sound effects. These snippets of Basic programs could then be included in your own masterpieces. From the October 1983 issue here is one of the first effects from Sounds Exciting called Attack of the Mutant Flies:

```
ENVELOPE 6,1,36,-36,0,20,20,0,126,
0,0,-126,126,126
SOUND 1,6,160,100
```

This first magazine also introduced an amusing cartoon character called Micro Kid. His antics kept readers smiling for quite a long time and was missed by many when he finally grew up and left for pastures new. At the foot of the page you'll find his first comic strip, in which he almost wears out

# TIME WARP 1985

## Journey back through the mists of time with Barry Woods' Tardis

his fingers typing in all the *Electron User* listings.

These listings were to form the backbone of the magazine, and in this particular little has changed over the years. Even now readers enjoy entering short game and utility program listings.

In fact, many of *Electron User's* arcade games were marketed by budget software supplier Alternative and they stormed the Gallup charts, at one time occupying almost all of the top 20 positions.

The fourth regular feature introduced on the first front cover was Software Surgery – a cartoon drawing of a surgeon operating on a joystick headed the first software reviews page.

What was available during that first month of the Electron's existence? Not surprisingly, the four titles reviewed were all from Acornsoft and included *Starship Command*, *Monsters*, *Meteors*, and *Draughts* and *Reversi*. All were to become classics and are great fun to play even now, six years after their release.

Last, but by no means least, Mike Cook injected useful technical knowledge for DIY enthusiasts and hardware boffins with an exploration and documentation of the Electron's gold-plated double sided 50-way edge connector at the rear of the case.

And that just about wraps up this trip back through the mists of time. Now it's back to the computing future!

**Darren Bradley moves  
a classic game from  
paper to the screen**

# Micro

**GUNBOAT** is a micro version of the popular pastime Battleships, the nautical game of skill and strategy for two players. Each is an admiral of fleets of warships, engaged in a battle of mammoth proportions.

Each fleet consists of five ships, which vary in size and thus in the number of direct hits required to sink them. Once the micro has initialised the screen, player two will be asked to leave the room, while player one's fleet is established.

The ships are then erased from the screen and the process is repeated for player two. The battle now starts:

Shots are fired by entering the coordinates of the target square and pressing Return. Shots are alternated until one player is annihilated.

Full instructions – including the number of ships you have and their sizes – are contained in the program. So type it in and issue your orders.

Player one positioning ships while player two is out of the room

# BATTLESHIP

BY BARRIE BRADLEY

## INSTRUCTIONS

### Introduction:

BattleShip is a version of the classic two player game. **BATTLESHIP**

This simulation allows two players to fight it out at sea, by attempting to find the opponent's hidden ships, and ultimately, to sink their fleet.

Each fleet consists of five ships:

- 1.) The Aircraft Carrier
- 2.) The Battleship
- 3.) The Destroyer
- 4.) The Submarine
- 5.) The Lug Boat

The ships are of different sizes, and thus require a varying number of hits to sink.

PRESS <SPACE-BAR>

The instructions are comprehensive

**SUMMARY**  
BY CORRELL PROBLEY

II 4 5 6 7 8 9 10 11 12

### How to play:

Each player must in turn, set the coordinates of their fleet, on the appropriate grid.

While a player is selling up their fleet, their opponent must leave the room or close their eyes, so as not to see the location of the other player's ship.

The keys with which to set up the fleet are:

[illegible]Press **[SPACE-BAR]**

Use 4243 as set up order designation.

## Same game, different name

I RECENTLY bought the new Code Masters release *Pro-Boxing Simulator*. When I tried it I discovered that it is identical to *By Fair Means or Foul* from Superior Software.

Please could you explain this coincidence? — David Milliken, Renfrew, Scotland.

● You're right, *Pro-Boxing Simulator* is exactly the same as *By Fair Means or Foul*. A spokesman for Code Masters told *Electron User* that he apologised for the misunderstanding and the cassette inlays will be reprinted to clarify the matter for future customers.

Anyone who has bought *Pro-Boxing* who already has *By Fair Means* should send it to Code Masters with a covering letter. They will be given the choice of a new game from the current catalogue.

## Listing hide and seek

COULD you please tell me where the listings for the speeding spiral in the May issue are?

● The two short listings you need are on page 28.

## Phantom letter changes

I HAVE had an *Electron* for about four years and have been very pleased with its operation, and have regularly bought *Electron User*.

However I have run into a snag with the *Data Delver* September 1989 issue, taken from the accompanying tape.

When I run the program, instead of getting a menu I get:

```
No such variable
"5480BCS not_decompress"
```

This is just a message and copy of line

# MiCRO MESSAGES

5480 that is printed by the error trapping routine, but I have checked the program over — even though it has been taken from tape — but cannot see an obvious mistake.

Please can you advise me what's wrong? — H. F. Knott, Wantage, Oxon.

● The magazine listing is correct, but somehow an e was changed to an a in line 5510 during the tape duplication process — Side 1 only. The correct line 5510 is:

```
5510 not decompress
```

There is, in fact, a backup of all the programs on the other side of the tape. Although this came from the same master disc, it is correct.

## Electron/BBC Micro games compatibility

WE have recently bought a BBC Master to replace our broken down *Electron* and were told that our games could be converted to be used on it.

Unfortunately, since being told this, we have learned from someone else that it isn't possible to use them after all.

Can you please let me know whether *Electron* games can be used on a Master, and if so, how can it be done?

Thank you for *Electron User*: We have all found it very helpful on many occasions. — Pauline Wise, Harrow Weald, Middx.

● The only sure way to find out if a game will work is to try it. Some will work but oth-

ers will not.

However, when a game works, you may find it's too fast to play on the Master. Also, even if it seems to work well you may be missing some of the features of an actual Master version.

You'll find that some companies put the BBC Micro and Master version on the other side of the tape so you can just use that.

## In a frenzy for a high score

IN December 1984 I bought myself an *Electron* and the first game I played on it was *Frenzy*.

Since then I have tried many other games, messed about with various programs and so on but always had the desire to beat the 600,000 author's score on *Frenzy*.

Today I did it at last. I scored 723,192 on my seventh attempt of the day. But what a let down: I expected at least a well done message from the game.

There was nothing: No trumpets or flags flying, just another score line. Talk about *Frenzy*.

But I do play other games. Here's my reader's point of view *Top Twenty*:

- 1 *Frenzy*
- 2 *Chuckie Egg*
- 3 *Danger UXB*
- 4 *Repton*
- 5 *Ravage*
- 6 *Condition Red*
- 7 *Plan B*
- 8 *Test Match*
- 9 *Quest*
- 10 *Palace of Magic*
- 11 *Elite*
- 12 *Gauntlet*
- 13 *Rig Attack*
- 14 *Stranded*
- 15 *Percy Penguin*
- 16 *Moonraider*
- 17 *Blockbuster*
- 18 *Astro Plumber*
- 19 *Strykers Run*
- 20 *Beach Head*

You'll note that *Frenzy* is still at the top of the list. I recommend this game for anyone. It's simple but addictive and must be one of the

## You just need a break

I HAVE reached the eighth screen of Superior's *Perplexity* and believe that it is impossible to complete unless one of the keys at the top right is facing left instead of right. Is there a fault or is it just me? — E. J. Byne, Sunbury on Thames, Middx.

● Steve Hanson, Superior Software, replies: There is nothing wrong with the keys, but some early copies of *Perplexity* were produced with a piece of wall on Screen 8 placed in the wrong position.

Once spotted, these copies were

destroyed, but unfortunately a few seem to have got into circulation. To recognise whether you have one of these rogue versions, check the top right of Screen 8.

The wall below the pair of keys at the top should have a break in it. If you have a faulty copy please return just the cassette — without the case or inlay — to Superior Software for a replacement. Please accept our apologies in advance.

If you have a faulty copy and wish to proceed, the password for Screen 9 is DSMIUM.

most under exposed games ever. - G Davies, Irlam, Manchester.

● It's amazing how the reader's points of view vary. We can only see one similarity - the classic Elite - between this list and the one expressed by Simon Tarry in the June issue.

## More modes for the screen dump

I HAVE just received my April monthly cassette and had a few problems loading Tetron. However, I soon solved these but I still have a problem with Addend. When I loaded the game and entered the two names I got the message:

```
No such variable at line 550
Bad program
```

This mystified me as line 550 was exactly as in the magazine. Have you any idea why this is happening?

Thank you for the Screen Dump program - Micro Messages, August 1989. As printed, it works in Mode 2 so I have made the following changes for other modes:

Mode 5: Change line 360 to read:

# MiCRO ESSAGES

```
360 EQUB D:EQUB 5*6:EQUB 6*6: EQ
UB 7*6
```

Mode 1: Change line 360 as above then change lines 240 and 280 to read:

```
240 LDX #3
280 CLC:LDA X:ADC #4:STA X:LDA X
+1:ADC #0:STA X+1 \K=X+4
```

Mode 4: Change lines 240 and 280 as above and line 360 to read:

```
360 EQUB D:EQUB 7*6
```

I have been trying to convert the program to Mode D but without success. Please could any other reader help? - David McMullen, Clayton Bridge, Manchester (age 14)

● Thanks for your program modifications. Your problem with Tetron must have been a clash between the program's machine code and a rom in your micro. The cure is to disable or remove roms if you have problems.

Addend needs PAGE set to &1900. Tape

users should load with the command:

```
PAGE=&1900:CHAIN""
```

Disc users who have Page at a different setting on their micro can either do the same or put an extra line in Addend:

```
0 IF PAGE <> &1900 THEN PA
GE=&1900:CHAIN"ADDEND"
```

## Three ways to go wrong

I TYPED in the Commando Cheat exactly as printed in the May issue. But, when I run it I get the message Syntax error at line 220.

I looked back at the list and I have typed it as shown in the magazine. Why is it that I get the Error message? - Stuart Gentry, Beverley, N. Humberside.

● There are certainly no errors in the line:

```
220 [OPTII
```

We can only assume you have not entered it as printed. We can see three places where you could have gone wrong:

◇ It is a square left-hand bracket - Shift with Copy - not either of the other shapes.

# Try to spot the difference

I HAVE a basic Electron with no add-ons. Could you please list a simple memory editor? And what is the difference between a memory editor and dissembler, if any?

Also, could you please tell me what the significance of Lines 1710 and 1720 in the Patience listing of The June 1987 issue of Electron User is?

These lines, or others almost the same, appear in a number of listings. - A. Langley, Stevenage, Herts

● There was a memory editor in the May issue of Electron User. A memory editor just shows you what's in each byte of memory and allows you to change it byte by byte.

A dissembler takes the bytes and converts them into assembler language. To illustrate, here's the same section of memory looked at by each method:

```
0200 10 E3 02 84 93 0C 89 DE .....
0208 89 DF 72 E7 EB E7 A4 E0 .....
0210 C5 DE 1B FF 1E FF 21 FF .....
0218 24 FF 27 FF 2A FF 2D FF $,*,*,-
0220 A6 FF A6 FF A6 FF A6 FF .....
```

A section of memory looked at with an editor

```
0200 10 E3 .. BPL &01E5
0202 02 .. EQUB &02
0203 84 93 .. LDY &93,X
0205 0C .. EQUB &0C
0206 89 .. EQUB &89
0207 BE 89 DF ... DEC &0F89,X
020A 72 .. EQUB &72
020B E7 .. EQUB &E7
020C EB .. EQUB &EB
020D E7 .. EQUB &E7
020E A4 E0 .. LDY &E0
0210 C5 DE .. CMP &DE
0212 1B .. EQUB &1B
0213 FF .. EQUB &FF
0214 1E FF 21 ...! ASL &21FF,X
0217 FF .. EQUB &FF
0218 24 FF $, BIT &FF
021A 27 .. EQUB &27
021B FF .. EQUB &FF
021C 2A .. ROL A
021D FF .. EQUB &FF
021E 2D FF A6 ... AND &A6FF
0221 FF .. EQUB &FF
0222 A6 FF .. LDX &FF
```

... and the same section viewed with a dissembler

Moving on to your other question, as your Electron is unexpanded the two lines you mention are not needed and will never be called. In Patience, they are called by line

40 if PAGE is higher than &E00 and move the program down in memory.

When a disc system - or other add-on like a rom cartridge - is added to your Electron it needs some memory. This is taken from &E00 upwards and your Basic program will then be higher - &1900 for DFS. This means that there is less room for the program to store variables and a long program may run out of memory. To prevent this happening, the disc interface is turned off - by the \*T. in the line - and the program is moved over the disc workspace.

It's a good idea to put lines like this in your programs wherever possible so you can be sure they will work on tape or disc.

But remember that as the disc interface is then inactive you can't use disc, so the technique is no use if your program needs to save, say, a high score table to disc.

```
40 IF PAGE>&E00 GO TO 1700
1700 REM Relocate
1710 *KEYD *T.|MOX=PAGE-&E00:
FORIX=PAGE TO TOP STEP4:!(IX-B
X)=!IX:NEXT:PAGE=&E00|MOLD|MRU
N|M
1720 *FX136,0,128
```

The sections of listing from the June 1987 issue

◆ The word OPT begins with O, not zero.

◆ The variable I is a letter, not the number one.

## Units that will not work together

*I'VE owned and operated an Acorn Electron and Plus 1 for a couple of years and was fortunate to obtain a Plus 3. Unfortunately I have not been able to utilise all components together.*

*The Plus 3 does not operate with the Plus 1 attached and the response when the Welcome disc is inserted is Disc error 61 at :3/056C69 on channel 189.*

*Can you please advise me how these problems might be resolved to give me full use of the micro? I am hoping to utilise the View wordprocessor for business letters and mailouts but I am reluctant to buy a printer until these problems are rectified. — Tony Mahood, Wellington, New Zealand.*

● The units are designed to work together so we can only suggest that one of them is faulty.

## Tape troubles terminated

*I WAS interested to read Mr. D. B. Johnson's letter in the March issue, referring to your response to my letter about tape loading problems in the January one.*

*When I wrote to you I had already tried all the checks mentioned in your reply to me, including changing the connect cable — which was brand new anyway. It made no difference.*

*The oddity about my Sony recorder lay in the fact that listening to a tape after I had attempted to record a program using it gave the usual noise. However, any attempt to load it into the micro was unsuccessful.*

*Paradoxically, the Sony would successfully load programs from commercial tapes or my own tapes saved on another recorder. I have simply dumped the Sony and bought the dedicated Acorn Data Recorder, which has eliminated all the problems I was encountering.*

*The Acorn Recorder was obtained — new and with a year's guarantee — from a mail order firm at a very low price. — S. H. Braithwaite, Lincoln.*

● Sony recorders are usually good quality, so we can't understand why you had such problems. However, it could be that it is stereo rather than mono.

Mono recorders are best for use with the Electron, but a stereo one will usually work. You may have to experiment to find which channel to use or whether using both is best.

The Acorn unit is ideal for the job —

# MiCRO ESSAGES

recording data rather than music — but we find that excellent results can be obtained from most recorders.

## Called to the bar

*COULD you please help me with the cheat for Commando in the May issue of Electron User? I would like to know what the lines are on either side of the F and on either side of MRUN in line 130:*

```
130 *KEY1 LOAD "Command 2" | F |  
M250 CALL&900|MRUN|M
```

*I typed it in, missing the lines out, as I did not know what they were. I tried the command RUN, put in all of the cheats, heard the bleep and started the tape, but nothing happened.*

*Could you please tell me what these are? — Paul Davidson (Age 12), Jesmond, Newcastle-upon-Tyne*

● The lines are the bar character, and you'll find it on the key to the left of Break — hold Shift as you press it.

When it is used in a \*key command it has the same effect as pressing Control with a key. So IM is the same as if you hold Control down and press M.

There are two of these control codes used in this line — IM and IF. The former is the same as Return: you can prove this by pressing Control+M instead of Return.

To explain IF you first need to look at line 140 of the program:

```
VDU7,21
```

This is really two VDUs together:

```
VDU7  
VDU21
```

The first one just makes a beep each time you type it — as does pressing Control+G. The second is the one we are interested in: To use the User Guide's technical terms, VDU21 switches the VDU drivers off.

Put simply, it switches the display off. If you type the command and press Return, you'll find that nothing else will show on the screen until the drivers are switched on again.

To turn the screen on you need to press F while holding Control down — or put IF in a \*key command that is eventually called.

So let's briefly explain what is happening in the Commando cheat. Function key 1 is defined in line 130 then line 140 causes a beep, switches the display off and then the \*fx138 command causes the same effect as

if the function key was pressed manually.

The commands in that line are then obeyed:

**LOAD"COMMAND2"** loads the program. The display is off from line 140 so you don't see anything happen.

**IF** switches the display on.

**IM(T)Presses Return.**

**250 CALL&900IM** is the same as typing a new line 250 and pressing Return, so it replaces the line 250 in **COMMAND2**.

**RUNIM:** Run Command 2 with the new line 250 which calls the code put in by the cheat at &900 — see line 210.

## Interested in Art Studio

*COULD you please review the Electron program, The Art Studio from Impact Software? This is probably the only art package available for an unexpanded Electron.*

*It is available for the Electron or BBC Micro on tape or disc for use either with keyboard or joysticks. I feel that a lot of people who read Electron User would be interested to know that a cheap and easy to use art package is available to them.*

*The review would also be a change from all games reviews. I hope that you will decide to review the Art Studio in a future issue. — Andrew Sage, Honiton, Devon.*

● The Art Studio is one of the products that we'll be looking at in the first issue of *Let's Compute!*. It will be packed full of information for users of all Acorn micros, including the Electron.

There are more details about it on page 24.

## Cleaning up the contacts

*IN the May issue of Electron User you published a letter from Tina Wall, saying that the down cursor key on her Electron had ceased to function. A similar thing happened to me a few months ago when the N on my machine suddenly became defunct.*

*I thought the problem might be that the contact under the key had become corroded, so I removed the screws and took the top off the machine to have a proper look under the key.*

*It appeared all right but I squirted a few drops of WD-40 under it to remove any corrosion that might be present. Then I pressed the key down a few times and it started to function again and has been all right ever since.*

*It could be that Tina has a more serious problem with her machine than mine proved to be, but it would be worth her while to try this remedy.*

*It must be very frustrating for her not to be able to use one of the cursor keys. — Joan Barnard, Buckhurst Hill, Essex.*

EXTRA  
COURSES  
AVAILABLE

The original two contrasting 18 hole courses. Comes complete with an easy to follow 16 page manual.

**£10.95 SAVE £2**

## WHITE MAGIC 1

White Magic is a arcade adventure in which you control four varied adventures.

You can mix between all four characters at will and use their much needed special abilities.

It features 32 massive action-packed levels.

A fast-action game which requires fierce hand-to-hand combat and frantic weapon fire.

## WHITE MAGIC 2

This includes 32 new and highly dangerous levels plus a complete level designer.

The level designer is easy to use. With it you can alter or design levels from scratch.

"The graphics are superb ... An absolute winner"  
*Electron User Golden Game, August '89.*

**£7.95 each  
SAVE £2**

## DUST COVERS

Keep your Electron free from dirt and dust with these smart dust covers. Made from rugged PVC, bound with strong cotton and sporting the distinctive *Electron User* logo, these are the perfect way to protect your micro.

**ONLY £4.95**

# FOUR SMASH HITS FROM SUPERIOR

## SUPERIOR SOCCER

— Arcade Soccer and Football Management

You can choose to play either the action-packed arcade game or the challenging football management game. Or, for the ultimate in football excitement and realism, you can play the combined arcade and management game. So you can choose to be a player-manager!

## SCHWARZENEGGER PREDATOR

You've heard about Predator, the Schwarzenegger film. Now you can play the leading role. Take a crack commando unit into South Africa jungle to rescue a bunch of trapped diplomats. Should be easy enough, so it would be if it weren't for the mysterious alien who keeps on taking out your men.

## BALLISTIX — It's a whole new ball game!

Sick of silly old soccer? Tired of pathetic pinball? Then you need a dose of BALLISTIX! It's the fastest, wackiest, toughest computer ball game yet — and a No.1 smash hit on the Atari ST and Commodore Amiga computers. Ballistix just explodes with excitement, puzzles and an amazing 60 different screens of frenetic action.

## RICOCHET

You control Sprat — the small partially robotic alien time traveller — in his quest to collect the five hour-glasses from the five worlds of Ricochet. Sprat can roll left and right, and can roll up and down ladders and ropes. But his unique ability is that he can jump to different heights and in different directions. You have to control this fast moving alien as he ricochets through the levels and solves the many clever puzzles.

## HOSTAGES

An urgent phone call from the National Security Minister....an Embassy has been overrun by terrorists. As Head of the Terrorist Combat Squad you are in control of all operations. First, you must place your crack marksmen in nearby buildings, avoiding infrared lights and the terrorists' deadly aim. Secondly, you must get your team of Specialist Paratroopers onto the Embassy roof.

Then, after descending by rope, and protected by your marksmen, enter the Embassy through the windows and begin your search in silence. But beware, each door, each room, could be a death trap! You must get the hostages, and your men, out of the buildings without any loss of life, and this will depend on the cohesion and co-ordination of your team. **NOW IT'S YOUR MOVE!**
